

Hi Recruiters, I'm Pavel Santelises.

I am writing to you with the purpose of obtaining an employment opportunity that allows me to grow both personally and professionally, but above all, that offers me the possibility of learning, broadening horizons and facing new challenges.

As you can see in my resume, I just graduated in Business Administration and Management at the Rey Juan Carlos University in Madrid. I started the career by vocation since I have always been attracted to the company and everything that it implies. Now and after graduating, I have acquired all the necessary theoretical knowledge, however, theory needs practice, the reason for this, this letter and my goal of getting a job.

During my last year of my degree, I did a professional internship at Deloitte, which allowed me not only to gain extensive experience in the audit & assurance area, but also to develop other skills and abilities such as time management, organization, teamwork and collaboration, as well as managing high pressure moments and the ability to work on multiple projects at the same time.

I am currently finishing the MBA "FutureLeader" at ThePowerMBA, in which I have been able to strengthen and expand my knowledge in areas such as accounting and finance, strategy and analysis, digital marketing, entrepreneurship, lean and agile methodology, leadership and much more. Also, and at the same time, I am doing a Bootcamp mainly oriented to front-end programming and web design, one of my great passions.

Regarding personally, I consider myself a passionate worker, tireless, without fear of adversity or any changes. I do not limit myself to what already exists, I like to go further, try new ways of doing things, find disruptive solutions; demonstrate that all is not defined or written.

In conclusion, I think I could add value to any project, so if you feel the same way, I encourage you to contact me for more information or to arrange an interview.

In advance, thank you very much for your time.

Sincerely,

Pavel Santelises
